PROFESSIONAL SUMMARY

Results-driven Digital Forensics and Cybersecurity Professional with 4+ years of hands-on experience in Digital Forensics, Incident Response (DFIR), Malware Analysis, Cyber Threat Intelligence, and Reverse Engineering. Experienced in handling cyber investigations, forensic acquisitions, malware triage, evidence preservation, and incident response activities for government agencies, law enforcement organizations, and enterprise environments.

Proven expertise in conducting static and dynamic malware analysis, memory forensics, network forensics, cloud investigations, and dark web intelligence operations. Skilled in using industry-standard forensic and reverse engineering tools including Cellebrite UFED, Magnet AXIOM, Belkasoft, FTK, IDA Pro, Ghidra, x64dbg, and Wireshark.

Successfully delivered Digital Forensics and Cyber Intelligence training programs to Indian Army, CBI, Delhi Police, CID units, Special Cell, and various government organizations. Adept at developing forensic automation tools using Python and C++ to accelerate investigative workflows and evidence analysis.

Strong understanding of MITRE ATT&CK Framework, Cyber Kill Chain, Web Application Security, Threat Hunting, OSINT, Malware Behavior Analysis, and Enterprise Incident Response methodologies.

CORE COMPETENCIES

- Digital Forensics & Incident Response (DFIR)
 - Malware Analysis & Reverse Engineering
 - Static & Dynamic Malware Analysis
 - Memory Forensics & Volatile Data Analysis
 - Windows & Linux Forensics
 - Mobile Device Forensics
 - Network Forensics & Traffic Analysis
 - Threat Intelligence & Threat Hunting
 - OSINT & Dark Web Investigations
 - Evidence Acquisition & Preservation
 - File System Analysis & Data Recovery
 - Registry & Event Log Analysis
 - Web Application Security Testing
 - Incident Investigation & Reporting
 - Cyber Threat Intelligence (CTI)
 - Cyber Kill Chain Methodology
 - Chain of Custody & Evidence Integrity
 - Digital Evidence Handling
 - Security Awareness & Technical Training
-

TECHNICAL SKILLS

Digital Forensics & DFIR Tools

- Autopsy
- FTK Toolkit
- Magnet Products
- Belkasoft Evidence Center
- Forensic Explorer
- Intella
- Cellebrite UFED
- XRY
- F-Response
- Passware
- Volatility
- MOBILedit
- Belakasoft
- Tableau Tx1, TX2, TD4
- Write Blockers

Malware Analysis & Reverse Engineering Tools

- IDA Pro
- Ghidra
- OllyDbg
- x32dbg
- x64dbg
- PEiD
- PESTudio
- CFF Explorer
- BinText
- Ole Tools
- Process Explorer
- Process Monitor
- Regshot
- TCPView
- Hex Editor

Networking & Security

- TCP/IP
- HTTP/HTTPS
- DNS
- UDP
- SSL/TLS
- Packet Analysis
- Web Penetration Testing
- SQL Injection
- Burp Suite
- DNS Enumeration
- Google Dorking
- Vulnerability Assessment

Operating Systems

- Windows
- Linux
- macOS
- Kali Linux

Programming & Scripting

- Python (Beginner to Intermediate)
 - C++ (Beginner)
 - Java (Beginner)
-

PROFESSIONAL EXPERIENCE

CYINT Technologies

Senior Technical Executive (DFIR) | Instructor – Digital Forensics & Cyber Intelligence

New Delhi, India | Nov 2022 – Nov 2025

CYINT Technologies is a leading Cyber Intelligence and Digital Forensics organization specializing in DFIR services, cyber investigations, digital forensic lab establishment, cyber intelligence operations, and law enforcement support.

Key Responsibilities & Achievements

- Conducted comprehensive digital forensic investigations involving endpoint systems, storage devices, mobile devices, cloud environments, and volatile memory analysis.
- Performed forensic acquisition, evidence preservation, chain-of-custody documentation, and forensic reporting aligned with industry and legal standards.
- Executed static and dynamic malware analysis to identify malicious behavior, persistence mechanisms, indicators of compromise (IOCs), and attack vectors.
- Conducted memory forensics and system artifact analysis for incident response and cybercrime investigations.
- Investigated Windows forensic artifacts including Registry analysis, Event Logs, browser history, USB artifacts, deleted file recovery, and user activity reconstruction.
- Worked extensively on OSINT operations and dark web investigations in collaboration with Army, Navy, Air Force, and various law enforcement agencies.
- Delivered professional training sessions and workshops on Digital Forensics, Incident Response, Malware Analysis, and Cyber Intelligence.
- Successfully trained personnel from Indian Army, CBI, Delhi Police, CID, Special Cell, IRTE (NFSU), and other government organizations.
- Assisted organizations in cyber incident investigations, evidence analysis, and forensic reporting.
- Conducted network traffic analysis and investigated suspicious network activity using forensic methodologies.
- Developed and maintained forensic investigation documentation, evidence reports, and technical findings.
- Stayed updated with evolving cyber threats, malware techniques, forensic technologies, and attack methodologies.

Technical Contributions

Forensic Triage Tool Development

- Designed and developed a custom forensic triage tool using Python and C++ for rapid on-site digital investigations.
 - Implemented modules for system artifact collection, running process analysis, file metadata extraction, memory inspection, and network connection monitoring.
 - Integrated real-time memory analysis and system health checks to assist investigators during live-response scenarios.
 - Optimized tool performance to ensure minimal impact on target systems while maintaining evidence integrity.
 - Improved investigation efficiency and reduced evidence collection time during field operations.
-

Craw Security

Mid Senior Forensic Analyst | Malware Research Analyst

Delhi, India | Feb 2021 – Nov 2022

Craw Security is a cybersecurity training and research organization specializing in ethical hacking, malware research, digital forensics, incident response, and cybersecurity awareness.

Malware Research & Threat Analysis Responsibilities

- Conducted malware research and threat intelligence analysis for emerging cyber threats.
- Downloaded and analyzed suspicious malware samples from controlled threat repositories and isolated environments.
- Performed static and dynamic malware analysis to identify malicious functionality, persistence techniques, payload execution, and system impact.
- Debugged malicious binaries using OllyDbg, IDA Pro, and other reverse engineering tools.
- Analyzed Portable Executable (PE) file structures, DLL files, PDF-based malware, and malicious Java files.
- Created detailed malware analysis reports including behavioral indicators, signatures, detection mechanisms, and IOC documentation.
- Conducted analysis in isolated sandbox environments to ensure safe malware execution and monitoring.
- Developed Cyclic Redundancy Check (CRC) signatures for malware identification and classification.
- Maintained safe file repositories and malicious sample collections for research purposes.
- Assisted in identifying suspicious network behavior, persistence artifacts, and malicious indicators.

Data Recovery & Digital Investigation Responsibilities

- Performed data recovery operations on corrupted and damaged hard disks.
 - Supported digital evidence collection and forensic preservation processes.
 - Assisted legal and investigative teams during evidence acquisition and analysis phases.
 - Worked closely with internal and external stakeholders to understand case-specific forensic requirements.
 - Assessed and implemented multiple forensic tools and recovery techniques for digital investigations.
 - Participated in cyber awareness workshops, technical demonstrations, and cybersecurity training sessions.
-

PROJECTS

Custom Forensic Triage Utility

Technologies Used: C++, Windows API

- Developed a lightweight forensic triage application to automate evidence collection during live-response investigations.
- Implemented modules for:
 - RAM Dump/Disk Image
 - BitLocker Recovery/Malware Analysis
 - Memory Analysis
 - System Artifact Collection

- Reduced manual investigation effort and accelerated initial incident assessment.
- Designed the utility to maintain evidence integrity while minimizing system impact.

Malware Analysis & Threat Intelligence Research

- Conducted extensive analysis of suspicious executables, DLL files, malicious documents, and malware payloads.
 - Performed both static and behavioral analysis in isolated lab environments.
 - Generated malware reports including indicators of compromise, execution flow, persistence mechanisms, and detection recommendations.
 - Studied malware packing, obfuscation, and anti-analysis techniques.
-

CERTIFICATIONS

- CHFI – Computer Hacking Forensic Investigator (EC-Council)
 - CTIA – Certified Threat Intelligence Analyst (EC-Council)
 - CEI – Certified EC-Council Instructor
 - CEHP Training – ICSS Kolkata
 - Web Penetration Testing – ZSecurity
 - Network Penetration Testing – ZSecurity
 - Social Engineering – ZSecurity
-

EDUCATION

Bachelor of Computer Applications (BCA)

Makhanlal Chaturvedi National University of Journalism and Communication | 2021

Intermediate (PCM)

Saraswati Vidya Mandir, Munger | 2017

Matriculation

New Era Public School, Munger | 2015

ADDITIONAL INFORMATION

Investigation & Security Domains

- | | |
|-----------------------------|----------------------------|
| • Digital Forensics | • Dark Web Investigation |
| • Incident Response | • OSINT Investigations |
| • Cyber Threat Intelligence | • Mobile Device Forensics |
| • Reverse Engineering | • Data Recovery |
| • Malware Research | • Network Traffic Analysis |

Soft Skills

- Technical Training & Mentoring
 - Analytical Problem Solving
 - Team Collaboration
 - Technical Documentation
 - Communication Skills
 - Research & Investigation
 - Attention to Detail
 - Adaptability & Fast Learning
-

DECLARATION

I hereby declare that the information provided above is true and accurate to the best of my knowledge and belief.
